CONFIGURACIÓN DEL GENERADOR

DEL MODELO AL CÓDIGO

The screenshot displays the Visual Paradigm Enterprise (Evaluation Copy) interface. The main window shows a Class Diagram with a package named 'MundoPets-PerifMascota'. The 'Instant Generator' dialog is open, showing the 'Generate' button and a progress bar at 100%. The 'Output path' is set to 'C:\Users\Fuer\OneDrive\Documentos\DanielITEQ\Semestre 4\II\exposicionIPP\generado'. The 'Template directory' is 'C:\Program Files\Visual Paradigm 17.3\resources\instantgenerator\templates'. The 'Generator Output' section shows the generated code for 'DocumentoVeterinario.cs'.

Instant Generator Dialog:

- Language: C#
- Select elements for code generation: Class Diagram (1)
- Options: ☐ Create folder for namespace, ☒ Implements abstract method, ☒ Follow Microsoft naming convention, ☐ Generate global for namespace, ☐ Auto-Implemented Properties
- Attribute prefix: ..
- Parameter prefix: ..
- Generate: Finished (100%)
- Output path: C:\Users\Fuer\OneDrive\Documentos\DanielITEQ\Semestre 4\II\exposicionIPP\generado
- Template directory: C:\Program Files\Visual Paradigm 17.3\resources\instantgenerator\templates
- Generator Output: Generating DocumentoVeterinario.cs to C:\Users\Fuer\OneDrive\Documentos\DanielITEQ\Semestre 4\II\exposicionIPP\generado...

Generated Code (DocumentoVeterinario.cs):

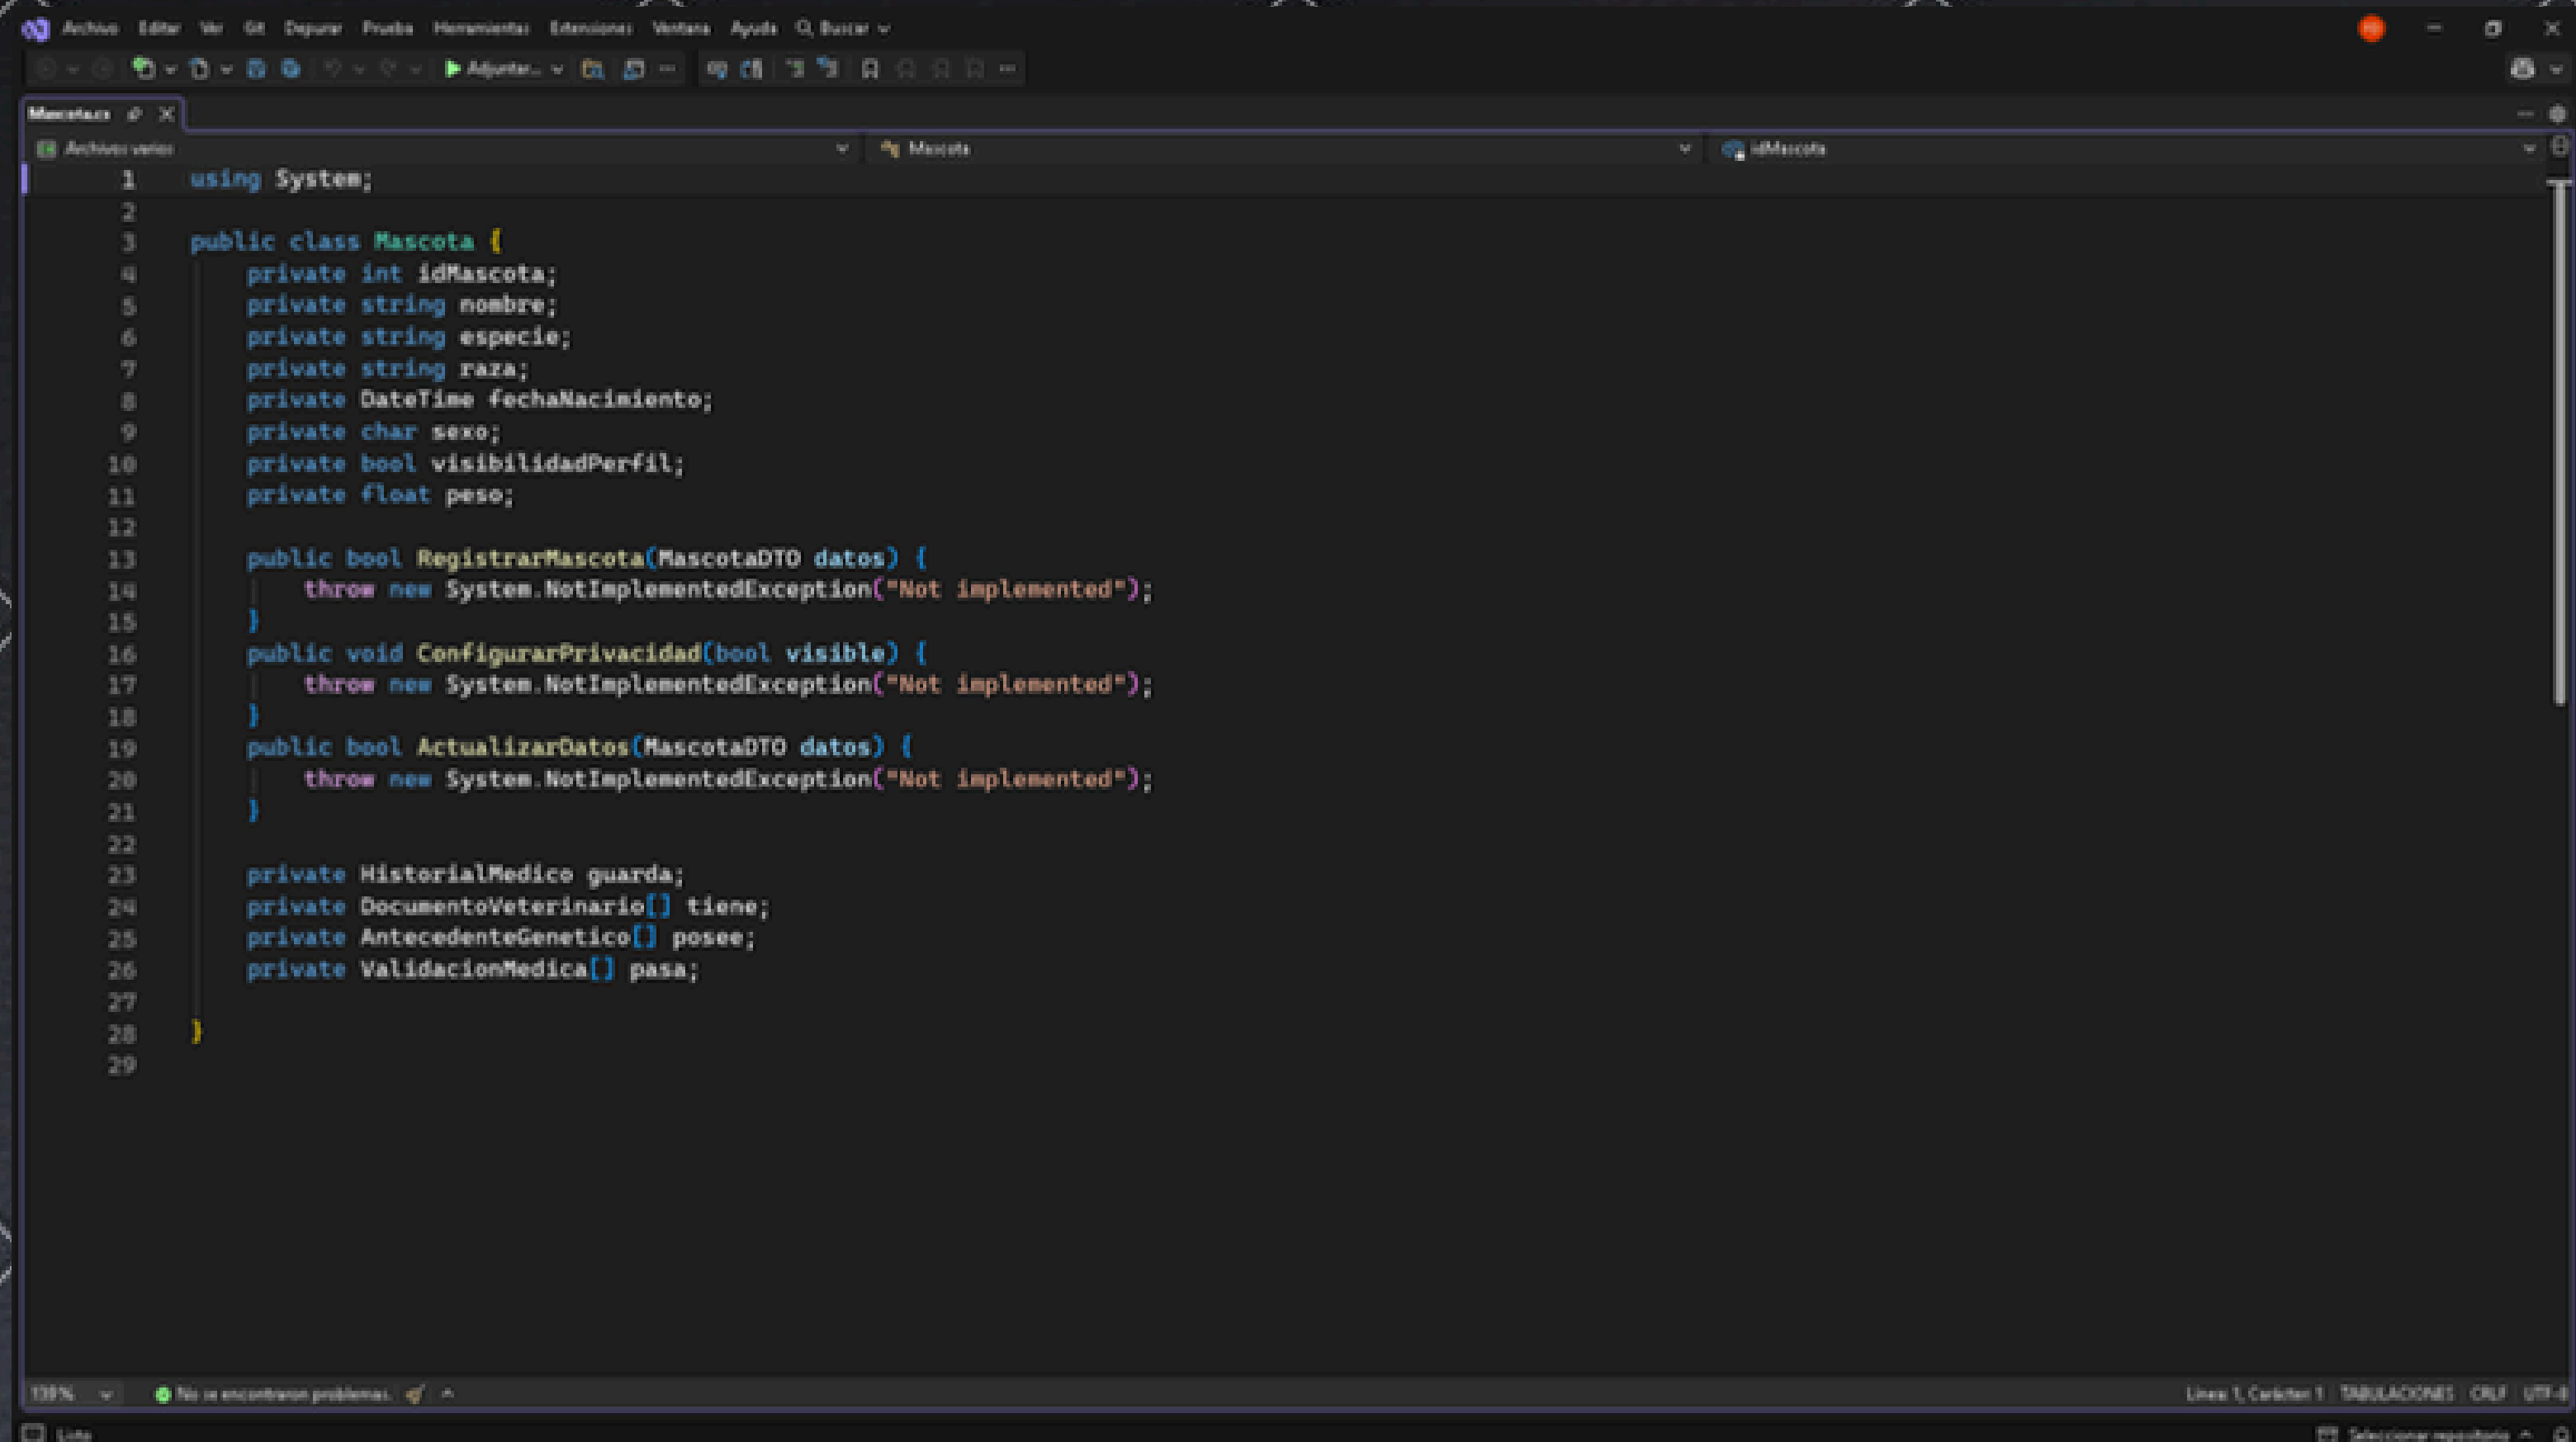

```
using System;

public class DocumentoVeterinario
{
    private int idDocumento;
    private string tipo;
    private string archivolR;
    private DateTime fechaEmision;

    public bool Adjuntar(string archivo) {
        throw new
            System.NotImplementedException("Not
            implemented");
    }
    public bool Eliminar() {
        throw new
            System.NotImplementedException("Not
            implemented");
    }

    private Mascota tiene;
}
```

DEL MODELO AL CÓDIGO

The image shows a screenshot of the Visual Studio Code editor with a C# file named `idMascota` open. The code defines a `Mascota` class with various private fields and public methods. The interface includes a menu bar at the top, a toolbar, and a sidebar on the left showing the file explorer. The status bar at the bottom indicates the current line and column.

```
1 using System;
2
3 public class Mascota {
4     private int idMascota;
5     private string nombre;
6     private string especie;
7     private string raza;
8     private DateTime fechaNacimiento;
9     private char sexo;
10    private bool visibilidadPerfil;
11    private float peso;
12
13    public bool RegistrarMascota(MascotaDTO datos) {
14        throw new System.NotImplementedException("Not implemented");
15    }
16    public void ConfigurarPrivacidad(bool visible) {
17        throw new System.NotImplementedException("Not implemented");
18    }
19    public bool ActualizarDatos(MascotaDTO datos) {
20        throw new System.NotImplementedException("Not implemented");
21    }
22
23    private HistorialMedico guarda;
24    private DocumentoVeterinario[] tiene;
25    private AntecedenteGenetico[] posee;
26    private ValidacionMedica[] pasa;
27
28 }
29
```

LIMITACIONES

- MÉTODOS VACÍOS (NOTIMPLEMENTEDEXCEPTION)
- ARREGLOS EN VEZ DE LIST
- DTOS MANUALES

CONCLUSIONES

- MDD DA BASE ESTRUCTURAL TRAZABLE
- EL CÓDIGO ES PUNTO DE PARTIDA, NO PRODUCTO FINAL

DEMOSTRACIÓN EN VIVO
